EMTEQ Delivers Full System Experience

QUASAR II and eQUATION See High Customer Demand

New Berlin, Wis., USA (October 2013) – EMTEQ will be showcasing their full-system experience this year at NBAA including eQuation™ and QUASAR II™. These products—several introduced at the NBAA Annual Convention & Trade Show in 2012—have been met with significant interest and excitement throughout 2013.

eQuation—our full line of cabin power products—features the intelliOutlet™ and intelliUSB SR™ which are simplifying power integration. The intelliOutlet combines Plug Presence Detection (PPD) and Ground Fault Interruption (GFI) into one compact unit eliminating five LRUs and excess wiring typical of other systems. Introduced at the NBAA Annual Convention & Trade Show in 2012, EMTEQ will install on over nine platforms and ship nearly 500 units by the end of 2013. The intelliUSB SR, introduced earlier this year, is a universal USB charging port capable of charging 90% of all phones, tablets, and other personal electronic devices at the same speed as on the ground due to its unique capability to switch between various charging specifications. With a compact footprint of only 1 1/8" x ¾" and remote power supply, it can be installed virtually anywhere on the aircraft.

Also introduced at the NBAA Annual Convention & Trade Show in 2012, EMTEQ's QUASAR II Full Spectrum Mood Lighting System is successfully setting the mood with installations on numerous platforms throughout 2013. EMTEQ will ship and install over 5000 feet of QUASAR II in 2013, nearly twice as much as EMTEQ's original QUASAR system introduced in 2006. The increased demand of mood lighting systems can be attributed to the increasing expectations of passengers, and advancing technology allowing for simplified integration and control. The advanced design of QUASAR II with two inch node resolution, allows it to create highly customizable scenes with dynamic colors and intensity levels. These scenes take mood lighting to the next level adding to the ambience in the cabin. EMTEQ's QUASAR II system is a 115VAC system designed with EMTEQ's Cabin Logic Network Protocol (CLNP) built in simplifying the installation eliminating the need for external power supplies and control boxes. This smart lighting system easily integrates with Cabin Management Systems.
