EMTEQ LED Interior Lighting Selected for B767 Fleet Refresh

New Berlin, Wis., USA (March 2011) – One of the world’s largest commercial Boeing 767 fleet operators has chosen EMTEQ, Inc. to provide LED cabin lighting which meets all interior lighting requirements to rejuvenate the interiors of their 767 fleet. Upgrading these aircraft to EMTEQ LED lighting provides many technical benefits, and more importantly makes for a more pleasant passenger experience.

“Our LED Wash Lighting offers immediate benefits: weight savings, reduced electrical power, increased functionality and reliability, which means lower maintenance costs, and we’re able to do that while accomplishing specific aesthetic goals,” said Dan Rice, Director of Air Transport for EMTEQ.

EMTEQ will be designing several new product variants for specific applications throughout the aircraft cabin, utilizing both 28VDC and 115VAC power requirements for seamless integration. Lighting upgrades to this B767 fleet include an assortment of reading and dome lights for work lighting in the galleys, lavatory entries, cockpit entry, and two and three unit reading light assemblies for the passenger service units throughout the passenger seating.

Included in the upgrade is EMTEQ’s lightweight 115VAC ceiling and sidewall wash lighting (ELW83). The ELW83 wash light provides enough intensity to illuminate the ceiling of the cabin with only two sets of lights versus four sets of fluorescent lights currently used. With dimming functionality, this product runs directly off of aircraft power and eliminates ballasts.

Additional products include night lighting throughout the cabin, colored accent lights and call lights. The LED lights offer reliable, consistent lighting in the aircraft’s cabin for enhanced passenger comfort and enjoyment, while providing the operator with weight savings and longer product lifecycles than traditional interior lighting. This interior lighting package will be certified in the beginning of 2011.
